

Ways for the installation of RFID-Tags

Direct lamination of the table

When laminating your table with RFID-Tags you have several options.

If you laminate the table all-over from below, it doesn't matter where your guest places the Table Tracker - you will locate him as if by magic!

Of course partial lamination is possible as well. The tags might be placed individually or ongoing at any position of your choice. However in this case it is necessary to spotlight with marks the position for your guest, so that he knows where the tracker has to be placed. In this way you make sure, that the localisation takes place.

You can laminate the table both below and on top.

If you want to stick the tags on the top, we recommend you a special label to protect the tag against vandalism.

All-over lamination below a wooden table
BACOA, Barcelona, Spain

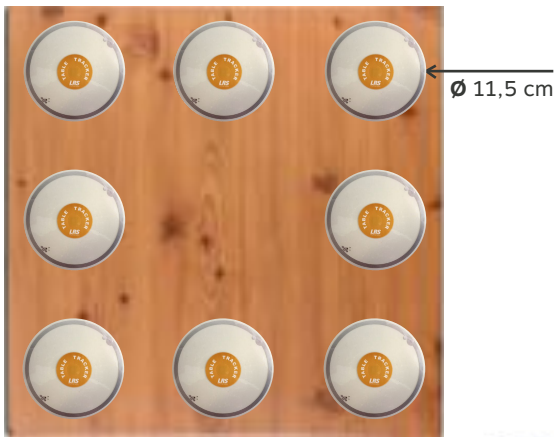

Burning mark on a wooden table
Oh Julia, Munich, Germany

table**

Painted marks on a wooden table
Dispensa Emilia, Modena, Italy

RFID on the table

An inexpensive solution -
partial lamination on the edge
underneath the table
Forni Rossi, Poznan, Poland

Through a special label protected against vandalism-
tags on the table
Dispensa Emilia, Bologna, Italy

Single toplabel
with integrated RFID-Tag

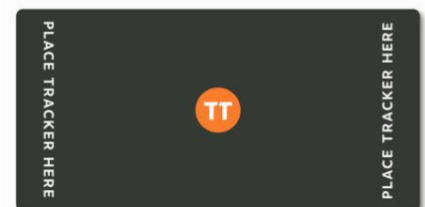

Usage of elements with integrated tags

If you wish another solution than a table lamination you can simply use
our docks.
With their integrated tags these moveable devices are an affordable
alternative.

The usage of table pads with integrated tags is also an
option. They are available for interior and exterior usage.

On request these pads can be equipped with a special foil
for usage on metal tables.
